

THE BIGGEST STEP

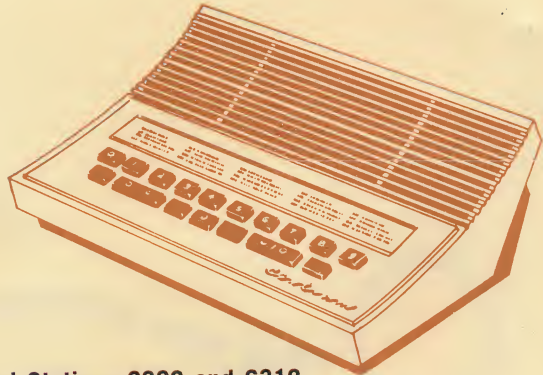

FORWARD SINCE THE TELEPHONE

**CENTRUM ELECTRONICS, INC.**

820 Second Avenue • New York City 10017 • MU 2-4880

**YOUR NEW CENTRUM**

Standard Stations 6302 and 6312

**T**HE CENTRUM is the most advanced intercommunication system in the world. Like the telephone system in your company, it uses a central, automatic exchange. Thus, as many as thousands of stations may be interconnected—each through a single wall jack. Your call goes through instantly, and conversations are normally hands-free for both parties. With your own Centrum, you'll soon see why we call the system the biggest step forward since the telephone!

## to originate a call:

1. Press first digit of number you want to call. Hold an instant—until you hear steady tone, and see amber button lit. Then press second (and remaining) digit buttons. If the amber lamp stays lit after releasing the last button, you are connected with the called station.
2. When the called party replies, just announce yourself and talk—hands-free\*.
3. When the conversation is concluded, press the red off-button to disconnect.
4. If, when making a call, you receive an intermittent tone, you have reached a “busy” station, and if the amber lamp stays lit, simply press the red off-button to disconnect.

5. If, however, you receive a steady tone, you have reached a station on “privacy.” If you don’t want to disturb the called party, disconnect by pressing the red off-button. If you want the call to go through, wait until the called party accepts, when the tone will stop, or proceed according to the routine of your company.

6. If the lamp of the red off-button is lit, do not place a call. The entire system is “busy.” As soon as a channel is free, the red light will go out, and the system is ready for your call.

\*Occasionally, the ambient noise levels between your room and that of the called party will be very out-of-balance, as when one party is an office and the other a noisy industrial area. In such a case, use the amber push-button to control the conversation on a press-to-talk and release-to-listen basis.

## to receive a call:

1. When somebody calls your station, the amber button will light up, and a half-second tone signal will alert you. Reply. You are now on a hands-free basis\*.
2. If you have pushed the "privacy" switch to up position, you will receive the tone calling signal and see the amber light when called, but your station will not be connected with the caller until you move the switch to the normal, lowered position.

During a conversation you can at any time move the "privacy" switch to up position to obtain complete privacy. If you are in "privacy" position and you want to let the calling party know that you do not intend to accept the call, you may push the red off-button.

3. If the caller should forget to cancel, you can do so by pressing the red off-button.

\*When the conversation is on a press-to-talk basis (see previous footnote), only the caller can operate the amber button. If the caller does not use this button, and has trouble talking with you, move closer to the set.

Centrum

## other centrum stations

**6307 and 6327** Identical with other Centrum stations, but cannot originate calls to other stations in the system. Tone and light call signals.

**6303 and 6313** Operation is identical with other stations, but handset with cradle provides utmost in privacy. Lifting handset automatically transfers both sides of conversation to handset. Privacy switch may be left in up position while using handset.

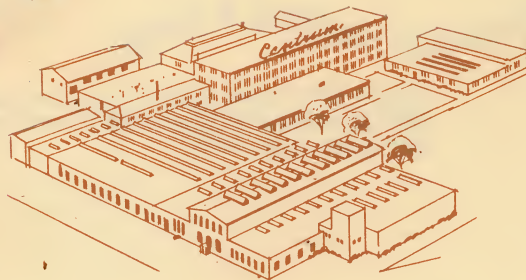

**6401** Wall-mounted handset, connectable with any station, provides same operation as preceding station.

**6304** Station for flush-mount or wall-mount applications, operates identically with other Centrum stations.

**6305** Weatherproof station for outdoor, dusty, or noisy production sites. Has high-power horn loudspeaker and close-talking microphone.

Centrum is a product of Gylling and Co. of Stockholm, Sweden, one of the world's leading manufacturers of communications equipment. The system is maintained by Centrum's 4-hour coast-to-coast network of technical representatives.

**special facilities & notes:**

**Centrum offers a great number of special facilities.  
Your Centrum representative will fill in special facilities of your station below.**
